

The vitamins C, D and B6 contribute, for example, to the normal function of the immune system. Niacin, vitamin B12 and pantothenic acid contribute to the reduction of tiredness and fatigue. Minerals include calcium which is needed for the maintenance of normal bones and teeth while zinc and selenium contribute to the maintenance of normal hair and nails.

Sufficient intake of vitamins and minerals is also important for mental well-being as, for example, magnesium and biotin contribute to normal psycological function and to the normal functioning of the nervous system.

We recommend mixing a scoop of powder in 200 ml water.
